

WHY RSign?

Digitizing Workflows with E-Signatures

RSign makes e-signatures simple and makes digitizing workflows affordable.

RSign® is the simplest to use, fullest featured, and most affordable enterprise grade web-based electronic signature service.

RSign makes it easy for signers to complete and sign documents using any desktop or mobile web browser in an intuitive, guided signing process.

- **RSign makes it easy to digitize workflows** with a friendly customer success team to advise and support process change.

Many customers choose RSign after reviewing the marketplace. They realize RSign teams are the most accommodating, flexible, and knowledgeable. This eases their burden of automating and digitizing complex processes.

- **RSign brings expansive enterprise-grade features at a lower cost;** generally, half the cost of other full-service providers.

If you have e-signatures somewhere in your organization's processes and are looking at renewal options or reducing cost as you expand use, RSign provides all the functionality that you will need at a lower cost and with a friendlier service experience. RSign makes it easy to automate with a full set of APIs and pre-built integrations (i.e. for Salesforce.com, Office 365).

- **RSign is committed to innovating** for its customers evolving needs.

There are only two enterprise-grade e-signature pure-play companies today; RSign and one other that is more expensive and more difficult to work with. These pure plays are driving product innovation. Other global e-sign vendors have been purchased by diversified companies and as typical, once part of a larger product portfolio, innovation slows. RSign is easy to work with, the most affordable, and a full-featured innovator.

- **RSign includes a simpler user design**, a highly configurable user interface, sharable templates, template rules and dependencies, custom workflows, real time reporting, advanced document configurations, APIs, and much more. RSign® has everything customers need in an e-signature service.
- **RSign patents add the most robust authenticatable audit trail** embedded in the e-sign record. Track transmission data, timestamps, and signoff; all signoff metadata may be secured into the final signoff record.
- **RSign and e-signatures by RPost® are a worldwide standard**, having been used for more than a decade in more than 100 countries worldwide by governments and businesses of all sizes.

Why RSign® services worldwide? Services are used by customers in countries worldwide in English, German, French, Dutch, Danish, Italian, Spanish, Portuguese, and other languages, having been deployed by global corporations, governments and businesses of all sizes across industries.

	RSign by RPost	AdobeSign	DocuSign
Simpler User Experience - Sender	Simplest, highly configurable, feature rich	Less intuitive, less configurable	Straightforward, less configurable
